

SAFA SALIM KAWARE

B.E. Computer Science & Engineering (AIML) | Third year
safakaware02@gmail.com | Chiplun, Maharashtra, India | <https://github.com/safa-kaware>

PROFESSIONAL SUMMARY

Highly motivated Computer Science student specializing in Artificial Intelligence & Machine Learning, with a strong academic record (CGPA: 8.98). Passionate about building intelligent systems and solving real-world problems through data-driven approaches. Demonstrated leadership through active volunteering at technical and non-technical college events. Seeking opportunities to apply classroom learning to industry challenges and contribute to innovative engineering teams.

EDUCATION

B.E. Computer Science & Engineering (AI & ML) | Gharda institute of technology , khed 2024-2028

- Semester 1 CGPA: 8.50 | Semester 2 CGPA: 8.98 | Semester 3 CGPA :8.86
- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Python Programming, Database Management Systems, Discrete Mathematics, Object-Oriented Programming

TECHNICAL SKILLS

Languages	Python, C, Java (Basics), HTML, CSS,JQuery,PHP,Javascript,Bootstrap
AI tools	Claude, Gemini, ChatGPT
Databases	MySQL,MongoDB
Tools & Platforms	Git, GitHub, VS Code, Google Colab,wordpress(basics)
Concepts	OOP, Full Stack web development with PHP
Soft Skills	Problem Solving, Team Collaboration, Event Management, Communication skills

TRAININGS / CERTIFICATIONS

Full Stack Java Programmings

Jul 2025 - Oct 2025 Seed InfoTech Ltd,Pune, Lavel

This course enabled me to learn deeply about full stack development using java and was very essential as it gave me a push in my early career life.

Database Management System

Jan 2026 - Feb 2026 Seed Infotech Ltd.Pune, Lavel

This course helped me understand deeply about databases and made me a understand core concepts of mysql and mongodb

PROJECTS

LI-FI Communication System Using Arduino *(First Year)*

Arduino | C/C++ | Photodiode | LED Transmitter | Serial Communication

Designed and implemented a Li-Fi (Light Fidelity) communication prototype using Arduino microcontrollers, enabling wireless data transmission via visible light signals. Programmed transmitter and receiver modules to encode and decode data through LED pulses, demonstrating a working alternative to traditional Wi-Fi-based communication. Presented the hardware prototype as part of the college technical exhibition, validating core concepts of optical wireless communication.

Attendance Tracking System *(Semester 3)*

Java | JDBC | MySQL | Java Swing (GUI) | OOP

Built a desktop-based attendance management system for tracking student attendance across subjects and semesters. Designed a relational database schema in MySQL and implemented full CRUD operations via JDBC. The application featured a Java Swing interface for faculty to mark, view, and generate attendance reports, reducing manual record-keeping effort significantly.

AI for Silent Dropouts — Early Student Dropout Detection *(Semester 4)*

Python | Machine Learning | Scikit-learn | Pandas | NumPy | Matplotlib

Developed a machine learning model to identify students at risk of silently dropping out before they disengage completely — a problem often invisible to educators until it is too late. Engineered features from academic performance, attendance patterns, and behavioral indicators, then trained and compared classification models (Logistic Regression, Random Forest, Decision Tree) to determine the highest-accuracy predictor. The system outputs risk scores per student, enabling proactive counselor intervention.

Pink Apron — Community Recipe Sharing Platform *(Personal Project)*

React.js | Node.js | Express | MongoDB | REST API | Claude AI API

Building a full-stack web platform where users can share recipes they love — and if they only know the dish name or a rough idea, the integrated AI layer generates the complete recipe and step-by-step cooking instructions automatically. Features include user accounts, recipe submission, a community feed, and AI-assisted recipe generation. Focused on making home cooking more accessible and community-driven.

Apex Arena — Sports Club & Facility Management Platform *(Personal Project)*

React.js | Node.js | Express.js | Firebase | MySQL | SQLite | Tailwind CSS

Developed a full-stack sports facility management platform designed to streamline operations for sports clubs and training centers. Built features including interactive court booking, trainer scheduling, membership applications, user authentication, and personalized booking dashboards. Implemented a scalable backend architecture with API handling, database integration, and responsive UI design to create a complete digital management solution.

Nayepankh Volunteer Registration System — NGO Management Platform *(Personal Project)*

React.js | JavaScript | Database | AI Integration | Admin Dashboard

Developed a volunteer management system for an NGO to simplify volunteer onboarding, event participation, and administrative workflows. Built a registration platform with an admin dashboard for managing volunteer data, reviewing applications, tracking engagement, and generating documents. Integrated an AI chatbot assistant to help users with queries and improve the overall platform experience.

VOLUNTEER EXPERIENCE

Tech Fest Volunteer — SHODH 2K26 | College Annual Technical Festival 2025-26

- Coordinated logistics and participant registration for coding competitions, hackathons, and robotics events
- Assisted in setting up demo stations and guided 200+ participants across multiple technical rounds
- Collaborated with a cross-functional team of 30+ volunteers to ensure smooth event execution

Cultural Fest Volunteer — SYNERGY 2K26 | College Annual Cultural Festival 2023 – 2024

- Managed stage coordination, audience engagement, and scheduling across cultural performances and group events
- Demonstrated strong organizational and interpersonal skills while working under time constraints

EXTRACURRICULAR ACTIVITIES

- Active member of the college Computer Science & AI/ML student club — participated in internal ideathons and group discussions on emerging tech trends
- Engaged in self-directed learning through tutdude, and YouTube — completed courses in Python for Data Science and Introduction to Machine Learning
- Passionate about reading tech blogs and following AI/ML research papers to stay current with advancements in the field

WHAT SETS ME APART

A note to the recruiter:

I am a second-year student who does not wait for opportunities — I create them. While most students at my stage are still figuring out their direction, I have already identified my focus in AI/ML, taken initiative with personal projects, contributed to my college community through volunteering, and maintained a consistently improving academic record. I bring a learner's mindset, an executor's attitude, and the hunger to make a meaningful impact. I am not looking for a shortcut — I am looking for the right foundation.
